Constructed at the Institute for Genomic Research (TIGR),
Constructed at the Institute for Genomic Research (TIGR),
Constructed at the Institute for Genomic Day a cloned population of
Trypancsoma brucei (TREU927/4 Gurat 10.1) was mechanically sheared
to give a tight size distribution (
4 kb). The v + i method used for the library construction is
described in detail in Smitch, H. and Venter, J.C. (Making small
insert libraries for whole genome shotgun sequencing small
Genome Sequencing: A Practical Approach, eds. M. Vaudin and B.
Barrell, Oxford University Press, 1999).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Trypanosoma.

Novel protease from Bacillus subtilis LC20 - useful in laundry and dishwashing detergents and for leather processing.

E. Claim 11, Page 52-53; 77pp; English.

X. Claim 11, Page 52-53; 77pp; English.

E. Contained in Bacillus subtilis LC20 NRRL B-11680. The protease gene was contained in Bacillus subtilis LC20 NRRL B-11680. The protease gene was contained in Bacillus subtilis LC20 NRRL B-11680. The protease gene was contained in Bacillus subtilis LC20 NRRL B-11680. The protease gene was correcting of chromosomal labraries, isolation of the 3 end 3 date and protease N-terminal and internal peptides (see AAW89549-50), correcting of chromosomal labraries, isolation of the 3 end 3 ends and protease PCR (see AAV82410-11). Reconstruction of 5 and 3 ends and protease PCR (see AAV82410-11). Claimed recombinant host cells can be used in amethod for producing the protease. The protease is used in be used in amethod for producing the protease. The protease is used in claiming the degree of hydrolysis of protein hydrolysates, for flavour development through hydrolysis of protein hydrolysates, for flavour clavelopment through hydrolysis of protein hydrolysates, for flavour clavelopment through hydrolysis of proteins degree of hydrolysis of protein hydrolysates, for that contains and in enzymmatic synthesis of potician of the provaces activity is diminished. Such cells can be bleaching agents of the peroxy type. The invention also provides mutant cells in which the protease activity is diminished. Such cells can be used for the production of heterologous recombinant proteins

XX sequence 3003 BP; 982 A; 504 C; 645 G; 972 T; 0 U; 0 other;

                                                                                                                                                                                                                                                          The invention relates to alkaline proteases produced by strains of Bacillus. The proteases ability to digest casein is not inhibited by cleid acid and they have a high stability to oxidising agents. The cleid acid and they have a high stability to oxidising agents. The clear acid protease of the invention has the following properties: (a) it is active over the prange 4-13 and has at least 80% of its optimum activity over the prange 6-11; (b) after 30 minutes at 40 deg. C it is atable over the ph range 6-11; (it is isoelectric point is 8.9-9.1; (d) its ability to digest casein is not inhibited by oleic acid; (e) it has made as enzymes in washing compositions for use in automatic dishwashers and for washing clothes. The stability to acidising agents allows the enzyme to be an effective component of washing compositions including bleaches. The present sequence represente an alkaline protease encoding bloaches. The present sequence represente an alkaline protease encoding bush. (Updated on 20-MAR-2003 to correct DR field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 915
